

Deliverable D6.3:

Project Results Final Report

What is the contribution of this deliverable to the overall goals of BEST?

The role of this deliverable is to provide a summary, aimed at a wide audience of ATM stakeholders, to explain what the project set out to do, what was achieved in the project, what relevance this may have in future for ATM stakeholders, and what further research in the area may be useful.

Current Status of the Deliverable

Completed and approved by funding authority (SJU).

What items does the deliverable contain?

When we talk about a “Deliverable” in BEST, we mean not only the formal document describing the work done, but also any associated technical artefacts such as software, models, ontologies, diagrams etc.

In its role as an overall summary of the project as a whole, this deliverable indirectly refers to all other project deliverables, including (in some cases) the technical artefacts to which they refer. The summary of deliverable D4.4 contains a convenient table with links to all technical artefacts.

Item#	Brief Description	What it can be used for
1	An overview of the project as a whole	To understand what the project set out to do, including its high-level objectives
2	Description of all high-level project results, presented in a simple tabular form (one table per result), showing what each result provides, its potential benefits and possible next steps in its development	To gain a quick idea of what was produced in the project, in order to know for each result whether its relevance to your own interests is sufficiently high that you should read detailed deliverables, or use some of the technical artefacts produced – or perhaps co-operate in future work in the area.
3	Overview of all formal deliverables produced in the project	Gain an overview of the deliverables and how they can be accessed directly

Item#	Brief Description	What it can be used for
4	Maturity assessment with respect to SESAR ATM Master Plan and SESAR Exploratory Research assessment criteria for TRL 1.	Understand better how the project fits in the overall SESAR context.
5	Project Conclusions	Understand the main “lessons learned” from the project on its completion.
6	Future R&D Possibilities	Gain insight into how BEST results could be further developed in the ATM domain – and perhaps link with other domains too.
7	Project Publications and Events	Learn what publications were produced in the project and (where possible) gain direct access to these.
